Camera Deployment & Community Hosting

USCN-POL-006 | Current version 1.1 | Original approved 19 October 2026 | Revisions approved/effective 20 October 2026 | DPO: Bertram Scanlon

RECONSTRUCTED CONTROLLED CURRENT TEXT — The exact original v1.0 file could not be recovered. This current text consolidates the documented original policy requirements and the approved 20 October 2026 changes. It is not represented as a verbatim recovery of the original.

1. Purpose and scope

This policy governs selection, assessment, installation, operation, host relationships, relocation and removal of USCN community CCTV cameras. It applies to USCN personnel, contractors and voluntary hosts.

USCN owns and controls the camera system and is controller of its operational footage. A host ordinarily provides mounting space, power, internet connectivity and reasonable access, but does not become controller of USCN footage merely by hosting.

2. Deployment approval and community necessity

Every proposed deployment must demonstrate a specific, documented community-safety purpose, a legitimate-interests assessment, proportionality and consideration of less intrusive alternatives.

Physical installation and limited technical testing may occur before commissioning. Operational recording must not begin until the camera-specific DPIA, technical checks, privacy arrangements, signage and written DPO commissioning approval are complete.

3. Site suitability and privacy

Assess mounting safety, weather exposure, power/network arrangements, field of view, neighbouring premises, entrances, vulnerable people, signage, retention, security and available privacy masking.

The approved field of view must be proportionate to the stated safety purpose. Material changes require reassessment and, where necessary, renewed DPO authorisation.

4. Voluntary hosting and contributions

Hosting is voluntary. USCN ordinarily provides and pays for the equipment, installation, routine maintenance, controller compliance and removal.

Hosts ordinarily contribute mounting space, reasonable access, electricity and internet connectivity at their own cost. No £2 reimbursement or other reimbursement is currently promised. Any future reimbursement scheme requires separately approved written terms.

Hosts are told the benefits and limitations clearly: visible community-safety infrastructure and USCN management of its own data-protection obligations, without any guarantee that crime will be prevented.

5. Host cooperation and rights

Hosts report faults, outages, damage, tampering, safety concerns and material changes affecting the site. Hosts should not routinely reposition, open, reset or administer the equipment; urgent safety concerns must be reported and reasonable protective action may be taken where necessary.

Hosts may ask questions, report incidents, request review of camera position, seek relocation and withdraw hosting permission. USCN remains the point of contact for complaints, data-subject requests and lawful footage enquiries concerning its system.

Hosts are not given automatic access to recordings, administrator functions or third-party personal data. Incident reports and footage requests can be made without prescribed forms or camera IDs.

6. Optional business-host live viewing pilot

An eligible business may apply for restricted live viewing. This is optional, separately assessed, revocable and not a contractual entitlement or consideration for hosting. Residential access is outside the initial pilot.

Before enabling access, USCN must complete a camera-specific DPIA and balancing assessment, technical checks, host terms, transparency updates and written DPO approval.

Any approved view must be privacy-masked, read-only and limited to the approved purpose and field of view; no recorded playback, export, administration, PTZ or audio access is granted. Authorised viewers must comply with access conditions and must not use the feed to track neighbours, staff or customers.

7. Footage enquiries and disclosure

USCN receives and triages requests promptly. A request may be made by email, telephone or another accessible means without a mandatory camera ID or particular form.

Where sufficient information exists, USCN will take reasonable steps to identify and preserve relevant footage promptly, subject to availability and lawful retention. Preservation does not guarantee the footage exists or may be disclosed.

Disclosure, including police requests, follows POL-002, with proportionate verification, documented lawful basis, privacy review and secure transfer. Urgent verified law-enforcement enquiries may be escalated.

8. Removal, termination and costs

A host may withdraw permission to host. USCN will ordinarily arrange safe removal within 30 days of the request, without cancellation or removal fees.

Where safe access, scheduling or other practical constraints prevent removal within that period, USCN will explain and arrange a revised date. Recording or access will be suspended earlier where the circumstances require it.

No historical tiered removal charges apply to this current policy. Any exceptional damage claim is distinct from, and must not be disguised as, a cancellation fee.

9. Maintenance and incidents

USCN manages routine technical maintenance, security reviews, appropriate repairs, fault triage and data protection matters within its responsibilities. Hosts assist with reasonable access and timely reporting of issues.

Material privacy incidents, changes to camera positioning and security concerns are escalated under POL-001, POL-003 and relevant incident procedures.

10. Records, review and accountability

USCN records the deployment purpose, host agreement, site checks, DPIA, DPO approvals, commissioning, changes, complaints, maintenance and removal decisions as appropriate.

The policy is reviewed on material legal, technical or operational change and following significant incidents or concerns. Approval of this policy does not itself authorise a specific camera or live-view account.

11. Approval and effective status

Original POL-006 v1.0 approved by DPO Bertram Scanlon on 19 October 2026. Current amendments approved on 20 October 2026 and effective immediately.

This is a reconstructed consolidated current text because the exact original v1.0 file is unavailable; any later discovery of the signed original should be reconciled in the controlled register.
