UK Safety Camera Network Ltd

USCN-POL-006 — Camera Deployment & Community Hosting

Version 2.0 — Complete Replacement

Status: Approved

Approved by: Bertram Scanlon, Data Protection Officer

Approval date: 20 October 2026

Effective date: 20 October 2026 (upon approval)

Review frequency: At least annually

Supersedes: reconstructed previous POL-006 edition

Document approval does not authorise individual camera commissioning or host live-viewing access.

1. Purpose

1.1

This policy establishes the requirements governing the assessment, approval, installation, operation, maintenance and removal of CCTV cameras deployed by UK Safety Camera Network Ltd (USCN), including cameras hosted voluntarily by businesses, community organisations and other suitable property occupiers.

1.2

Its purpose is to ensure that camera deployments are lawful, necessary, proportionate, technically secure and accountable, while providing clear arrangements for participating hosts and protecting the rights and freedoms of individuals who may be recorded.

1.3

The policy applies to proposed and existing USCN camera deployments, hosting arrangements, deployment assessments, commissioning decisions, host communications, operational changes and decommissioning activities.

1.4

USCN remains responsible for determining the purposes and essential means of CCTV processing undertaken as its own controller activity. A hosting arrangement does not, by itself, transfer those responsibilities to the property owner or occupier.

1.5

No camera may commence recording merely because equipment has been installed or a host has agreed to participate. Operational commencement requires completion of the applicable camera-specific assessments, safeguards and written authorisation.

1.6

Any restricted live-viewing access proposed for a business host is a separate, optional arrangement. Hosting does not automatically confer access to live images, recordings, camera controls or administrative functions. Such access must satisfy the separate requirements of USCN's applicable security and live-viewing policies.

1.7

This policy must be read alongside USCN's CCTV operations, footage handling, technical security, transparency, live-viewing and data-protection governance documents. Where an activity requires a separate assessment or approval, compliance with this policy alone does not replace that requirement.

2. Eligibility, Site Selection and Deployment Assessment

2.1 Eligible community hosts

USCN may enter into voluntary camera-hosting arrangements with suitable businesses, community organisations, property owners, lawful occupiers and other parties who have the necessary authority to permit equipment installation.

Participation is voluntary and free of charge. Hosts are not required to purchase CCTV equipment or pay USCN for installation, routine maintenance or participation in the community camera network.

2.2 Host contributions

Subject to the agreed hosting arrangements, participating hosts ordinarily provide:

- A suitable and authorised location for mounting the camera and associated equipment.
- Access to an appropriate electricity supply.
- A suitable internet connection where required for the approved deployment.
- Reasonable access for installation, inspection, maintenance and removal.

USCN ordinarily supplies, configures, maintains and removes its camera equipment at its own expense.

No host reimbursement scheme applies unless a separate arrangement is expressly approved in writing.

2.3 Site eligibility

Before accepting a proposed location, USCN must assess whether the site is appropriate for the stated public-safety purpose.

Relevant considerations include:

- The nature and evidence of the local safety concern.
- Whether CCTV is necessary and proportionate to address that concern.
- Whether less intrusive measures could reasonably achieve the same objective.
- The proposed camera position, viewing direction and field of view.
- The likely impact on residents, pedestrians, neighbouring properties and other individuals.
- Installation safety, power and connectivity.
- The host's authority to permit installation and any necessary third-party permissions.
- The suitability of the proposed location for secure and reliable operation.

Acceptance of a host application does not guarantee that a camera will be installed.

2.4 Privacy by design

Camera placement and configuration must minimise unnecessary recording of private or unrelated areas.

USCN must consider appropriate positioning, field-of-view restrictions, privacy masking and other proportionate safeguards before commissioning.

Cameras must not be deliberately positioned to monitor the interior of private homes or other areas where individuals have a heightened expectation of privacy, unless a distinct lawful basis and exceptional justification have been documented and authorised.

2.5 Camera-specific assessment

Every proposed deployment must undergo a documented assessment before recording begins.

This must include:

1. A defined and documented purpose.
2. A necessity and proportionality assessment.
3. A camera-specific Data Protection Impact Assessment (DPIA), including relevant risks and mitigations.
4. Confirmation of the applicable lawful basis and legitimate interests assessment, where relied upon.
5. A review of the proposed field of view, signage and transparency arrangements.
6. Technical security and installation checks.
7. Confirmation of the hosting permissions and applicable agreement.
8. Written commissioning authorisation by the DPO.

Where a DPIA identifies a high residual risk that cannot be sufficiently mitigated, USCN must not proceed without satisfying any applicable requirement for prior consultation with the Information Commissioner's Office.

2.6 Approval and commissioning

A camera must not begin operational recording until its required assessments, safeguards and permissions have been completed and written commissioning authorisation has been granted.

The commissioning record must identify the camera, approved location, permitted purpose, responsible personnel, applicable safeguards and date of authorisation.

Installation, testing, operational commissioning and any subsequent authorisation for restricted live viewing must be recorded as distinct activities.

2.7 Changes after approval

Material changes to camera location, field of view, recording arrangements, connectivity, host access or other processing conditions must be assessed before implementation.

Where a change materially affects privacy risks or the approved processing activity, USCN must review and, where necessary, update the DPIA and obtain renewed authorisation.

2.8 No automatic entitlement

Neither the submission of a hosting request nor the signing of a hosting agreement creates an automatic entitlement to camera installation, operational recording, footage disclosure or live-viewing access.

USCN may decline or defer a proposed deployment where the legal, privacy, security, operational or proportionality requirements cannot be satisfied.

3. Hosting Agreements, Responsibilities and Host Rights

3.1 Written hosting agreement

Before installing a camera on premises controlled by a participating host, USCN must establish a written hosting agreement with the person or organisation authorised to permit the installation.

The agreement must identify the parties, the proposed installation location, their respective responsibilities and the arrangements for access, maintenance, termination and equipment removal.

A hosting agreement does not itself constitute authorisation to commence CCTV recording.

3.2 Voluntary and free participation

Participation in the USCN community camera network is voluntary and free of charge.

USCN does not charge hosts for participating, providing the camera equipment, routine installation, maintenance or ordinary removal.

Hosts ordinarily contribute a suitable mounting location, a small amount of electricity and internet connectivity where required.

USCN does not ordinarily reimburse hosts for electricity, internet connectivity or other incidental hosting costs.

Any exceptional financial arrangement must be documented and separately authorised before it takes effect.

3.3 USCN responsibilities

USCN is responsible for:

- Supplying and retaining responsibility for its camera equipment.
- Assessing the suitability and privacy implications of proposed deployments.
- Installing, configuring and maintaining the equipment through authorised personnel.
- Implementing appropriate security and access controls.
- Managing CCTV recording, retention, access requests and lawful disclosures.
- Providing appropriate privacy notices and signage.
- Maintaining applicable deployment, maintenance and incident records.
- Responding to privacy concerns, complaints and requests for equipment removal.
- Arranging safe removal of USCN equipment when the hosting arrangement ends.

USCN remains responsible for the CCTV processing activities for which it determines the purposes and essential means.

3.4 Host responsibilities

Participating hosts must:

- Have the necessary authority to permit the installation and notify USCN of relevant changes to that authority.
- Provide the agreed mounting location, electricity and connectivity where applicable.
- Permit reasonable access by authorised USCN personnel for installation, inspection, maintenance and removal.
- Avoid interfering with, repositioning, disconnecting or modifying the camera or associated equipment without authorisation, except where immediate action is reasonably necessary to address a safety emergency.
- Promptly report suspected equipment faults, security incidents, damage, interference or significant changes affecting the installation.
- Avoid representing themselves as authorised to access, control or disclose footage unless separately authorised.

Hosts are not expected to administer the CCTV system or determine the purposes of USCN's CCTV processing merely because they provide the installation location.

3.5 Host rights and participation

Hosts may:

- Raise concerns about the camera's location, operation or effect on their premises.
- Report incidents or relevant public-safety concerns to USCN.
- Request preservation or disclosure of footage relating to an incident, subject to applicable legal and privacy requirements.
- Request information about the hosting arrangement and applicable responsibilities.
- Request review of the camera's positioning or continued necessity.
- End their participation and request removal of the equipment.

A request for footage does not create an automatic right to receive recordings containing other individuals' personal data.

3.6 Restricted business-host live viewing

Selected business hosts may be considered for restricted, read-only live viewing where USCN determines that the arrangement is lawful, necessary, proportionate and compatible with the approved purpose.

Such access is optional and is not an automatic benefit of hosting.

Before access is enabled, USCN must complete and document the applicable camera-specific privacy assessment, security safeguards and written DPO authorisation.

Where authorised, access must be individually authenticated and restricted to the approved live view. It must not provide recording playback, footage export, administrative privileges or camera configuration controls.

USCN may suspend or withdraw access where necessary for security, privacy, compliance or operational reasons.

3.7 Ending the hosting arrangement

A host may request termination of the hosting arrangement without a cancellation fee or contractual financial penalty.

USCN will ordinarily arrange removal of its equipment within 30 calendar days of receiving the request, subject to reasonable access arrangements, safety requirements and circumstances outside its control.

Where removal cannot reasonably be completed within that period, USCN must explain the reason and provide a revised removal arrangement.

USCN may also terminate a hosting arrangement where continued deployment is no longer necessary, proportionate, safe, lawful or operationally appropriate.

3.8 Recording cessation and equipment removal

Termination of the hosting agreement and physical removal of equipment are separate activities.

Where continued recording is no longer justified or authorised, USCN must cease operational recording promptly, even if physical equipment removal is scheduled for a later date.

Equipment removal must be conducted safely and with appropriate protection of any stored personal data.

Existing recordings must be handled under the applicable retention, preservation, disclosure and secure-disposal requirements.

3.9 No transfer of ownership or operational control

Unless expressly agreed otherwise in writing, camera equipment supplied by USCN remains the property of USCN.

Providing premises, power or connectivity does not confer ownership of the equipment or operational control over its recording functions.

Any separately authorised host access remains limited to the specific permissions granted by USCN and may be revoked where justified.

4. Installation, Technical Controls and Operational Safeguards

4.1 Authorised installation

All USCN camera equipment must be installed, configured, inspected and maintained by personnel authorised by USCN.

Installation must comply with applicable safety requirements, manufacturer instructions, agreed property permissions and the camera-specific deployment assessment.

Installation must not be treated as permission to begin operational recording.

4.2 Camera configuration

Cameras must be configured to operate only within their documented and approved purposes.

Unless separately assessed and authorised under a revised policy and lawful processing framework, USCN cameras must not use:

- Audio recording.
- Automatic Number Plate Recognition (ANPR).
- Facial recognition or biometric identification.
- Automated individual tracking.
- Unrestricted pan, tilt or zoom functionality.

Any available equipment capabilities that are not authorised for use must be disabled or otherwise effectively restricted.

4.3 Field of view and privacy protection

Before commissioning, USCN must verify that each camera's actual field of view is consistent with its approved deployment assessment.

Camera positioning and any applicable privacy masking must minimise unnecessary capture of private property, residential windows, entrances or unrelated areas.

Privacy controls must not be removed or materially altered without documented reassessment and authorisation.

4.4 Recording arrangements

USCN's standard recording model is motion-triggered video recording, rather than unrestricted continuous recording.

Any proposed departure from this model requires a documented assessment of necessity, proportionality, privacy impact and operational justification, followed by written DPO approval before implementation.

Recording must be limited to the approved camera, location, purpose and configuration.

4.5 Storage and retention

Operational recordings must be held on appropriately secured local storage, such as encrypted SD-card or network video recorder (NVR) storage, in accordance with USCN's technical security requirements.

Operational cloud recording is not permitted under the standard deployment model.

Routine recordings must be automatically overwritten or securely deleted within a maximum of 31 days unless a lawful preservation hold or another specifically documented retention requirement applies.

Preserved recordings must be subject to documented access controls, review and eventual secure disposal when the relevant justification ends.

4.6 Connectivity and access security

Camera connectivity must be configured to minimise exposure to unauthorised access.

USCN must apply appropriate authentication, access restrictions, encryption, software maintenance and other technical and organisational safeguards proportionate to the identified risks.

Host-provided internet connectivity must not confer access to camera administration, recordings or other USCN systems.

Credentials and sensitive technical configuration details must be protected and must not be disclosed in public-facing deployment records.

4.7 Technical commissioning checks

Before operational recording is authorised, USCN must verify and document, as applicable:

1. Physical installation and electrical safety.
2. Approved camera position and field of view.
3. Privacy masking and other required privacy controls.
4. Recording mode and retention configuration.
5. Storage security and access restrictions.
6. Network and remote-access security.
7. Correct operation of authorised equipment functions.
8. Privacy signage and transparency information.
9. Completion of the camera-specific DPIA and relevant risk mitigations.
10. Written DPO commissioning authorisation.

Any material failure must be resolved before operational commissioning.

4.8 Maintenance and security updates

USCN must maintain equipment through appropriate inspection, fault management, software updates and security reviews.

Maintenance activity must be carried out by authorised personnel and recorded where appropriate.

Security updates and configuration changes must follow USCN's change-control arrangements, including assessment of any material effect on privacy, recording behaviour or approved access permissions.

4.9 Faults, security incidents and suspension

Where a fault, suspected compromise, inappropriate field of view or other material risk is identified, USCN must assess the issue promptly.

Where necessary, recording or remote access must be suspended until appropriate safeguards have been restored and the system is authorised to resume operation.

Suspected personal data breaches must be handled under USCN's incident-response and breach-management procedures.

4.10 Restricted live-viewing safeguards

Where restricted business-host live viewing has been separately authorised, the technical configuration must enforce the approved limitations.

Access must be read-only, individually authenticated and restricted to the approved camera view.

Business-host access must not provide playback, recording export, unrestricted camera controls or administrative privileges.

Access permissions must be logged or otherwise auditable as appropriate, periodically reviewed, and promptly withdrawn when no longer justified.

4.11 Recommissioning following material changes

A camera must undergo an appropriate reassessment before resuming operation following any material change affecting its approved purpose, location, field of view, recording arrangements, security controls or authorised access.

Where required, the camera-specific DPIA must be updated and renewed written DPO authorisation obtained before the revised operation begins.

4.12 Operational records

USCN must maintain appropriate records of installation, commissioning, configuration approvals, material maintenance, security incidents, significant changes, suspensions and decommissioning.

Public transparency records must provide meaningful information about authorised deployments without exposing credentials, sensitive security configurations or other information whose disclosure would create a disproportionate security or privacy risk.

5. Privacy, Transparency and Community Accountability

5.1 Commitment to transparency

UK Safety Camera Network Ltd (USCN) must operate its community camera network transparently and accountably, providing meaningful information about its CCTV activities while protecting personal data and sensitive security information.

USCN must ensure that individuals can understand why cameras are deployed, who is responsible for them, how recordings are handled and how to exercise their rights.

5.2 Public privacy information

USCN must make appropriate privacy information readily available, including:

- The identity and contact details of the data controller.
- The purposes and lawful basis of CCTV processing.
- The categories of personal data processed.
- The routine retention period and circumstances permitting longer preservation.
- The categories of recipients to whom footage may lawfully be disclosed.
- Information about applicable data protection rights.
- How to make a complaint or raise a concern.
- How to contact the Data Protection Officer.

Public privacy information must be consistent with the actual processing undertaken and reviewed when material changes occur.

5.3 Camera signage

Appropriate CCTV signage must be installed before operational recording begins.

Signage must be sufficiently visible to give individuals meaningful notice that CCTV recording may occur.

It must identify USCN as the responsible organisation, explain the principal purpose of recording and provide a practical route to further privacy information.

Signage must be checked during commissioning and maintained throughout the deployment.

5.4 Public camera directory

USCN must maintain a public camera directory identifying operational camera deployments at an appropriate level of detail.

Where lawful and proportionate, the directory should provide:

- A camera reference or identifier.
- A general location or description of the area covered.
- The principal public-safety purpose.
- The camera's operational status.
- A link to relevant privacy information.
- A means of contacting USCN about the deployment.

Exact technical configurations, credentials, private network information and security-sensitive infrastructure details must not be published.

The directory must not describe proposed, unapproved or uncommissioned cameras as operational.

5.5 Accuracy of public deployment information

USCN must take reasonable steps to ensure that public information about camera deployments is accurate and current.

Material changes to a camera's operational status, location or approved purpose must be reflected in the public directory within a reasonable period.

Where publication of particular details would create a demonstrable security or privacy risk, USCN may provide a less precise description, provided the remaining information is sufficient to support meaningful transparency.

5.6 Community concerns and objections

Individuals, residents, businesses and community organisations may raise concerns about proposed or existing camera deployments.

USCN must provide accessible routes for reporting concerns about:

- Camera positioning or field of view.
- Unnecessary or disproportionate surveillance.
- Recording of private property or sensitive areas.
- Inadequate signage or privacy information.
- Suspected misuse of footage.
- Continued necessity of a deployment.

Concerns must be assessed fairly, documented where appropriate and escalated to the DPO when they raise material data protection issues.

5.7 Review of camera necessity

USCN must periodically review whether each operational camera remains necessary and proportionate for its documented purpose.

Reviews must consider relevant changes in local circumstances, privacy risks, camera effectiveness, complaints, technical arrangements and available less intrusive alternatives.

Where a deployment can no longer be justified, USCN must suspend or cease recording and arrange appropriate decommissioning.

5.8 Requests for footage and personal data rights

Individuals may contact USCN to request access to their personal data, raise concerns about recordings or exercise other applicable data protection rights.

USCN must not require a camera reference number as a condition of submitting an initial request.

Requests may be initiated through the published contact routes and must be handled under USCN's footage access, disclosure and data subject rights procedures.

Where a request identifies a relevant incident or recording period, USCN should consider prompt preservation where lawful and reasonably practicable, while applying proportionate identity verification and third-party privacy safeguards.

5.9 Police and other lawful disclosures

Footage may be disclosed to police, other competent authorities or third parties only where an appropriate legal basis and applicable disclosure conditions have been established.

USCN must verify requests as appropriate, assess necessity and proportionality, protect the rights of affected individuals and maintain an auditable record of disclosures.

Police requests may be prioritised where justified by urgency, without bypassing lawful disclosure checks.

5.10 Public complaints and escalation

USCN must maintain a clear procedure for receiving, investigating and responding to complaints about its camera network.

Individuals must be able to contact the DPO regarding data protection concerns.

Where applicable, privacy information must explain the right to complain to the Information Commissioner's Office (ICO).

USCN must not suggest that an individual is required to complain to USCN before exercising their right to approach the ICO.

5.11 Publication of governance documents

USCN should make its current public-facing CCTV policies, privacy information and relevant governance documents available through its transparency website.

Public editions may omit narrowly identified information where disclosure would create a legitimate security, confidentiality or privacy risk.

Redactions must be necessary and proportionate. Ordinary explanatory wording must not be concealed merely because it appears in the same sentence or paragraph as sensitive information.

Document approval, publication and operational authorisation must be distinguished in public records.

5.12 Accountability and audit records

USCN must maintain appropriate internal records supporting its deployment decisions, DPIAs, commissioning authorisations, privacy reviews, complaints, footage disclosures, maintenance and decommissioning activities.

These records must be available for appropriate internal oversight and lawful regulatory scrutiny.

Public reporting must not imply that a deployment has been independently certified, inspected by a regulator or operationally authorised unless that claim is supported by evidence.

6. Monitoring, Reviews, Suspension and Decommissioning

6.1 Ongoing operational oversight

UK Safety Camera Network Ltd (USCN) must maintain appropriate oversight of each commissioned camera to ensure that its continued operation remains lawful, necessary, proportionate, secure and consistent with its approved purpose.

Operational oversight must include consideration of equipment condition, recording configuration, privacy safeguards, access permissions, security risks and relevant complaints or incidents.

6.2 Scheduled deployment reviews

Every operational camera must undergo a documented deployment review at least annually, and sooner where material changes or concerns arise.

The review must consider:

- Whether the original public-safety purpose remains valid.
- Whether continued CCTV processing is necessary and proportionate.
- Whether less intrusive alternatives have become reasonably available.
- Whether the camera's field of view remains appropriate.
- Whether recording, retention and access controls remain compliant.
- Whether privacy notices and signage remain accurate.
- Whether the hosting agreement and relevant permissions remain valid.
- Whether complaints, incidents or changes in local circumstances require additional safeguards.

The outcome and any required corrective actions must be recorded.

6.3 Event-triggered reviews

USCN must conduct an additional review where circumstances materially affect a camera's continued suitability or compliance.

Relevant triggers include significant privacy complaints, changes to the location or field of view, security incidents, changes in the hosting arrangement, proposed changes to recording or access arrangements, and new information indicating that continued surveillance may no longer be justified.

Where appropriate, the camera-specific Data Protection Impact Assessment (DPIA) must be updated.

6.4 Suspension of recording

USCN must suspend recording where continued operation would present an unacceptable or inadequately controlled legal, privacy, safety or security risk.

Grounds for suspension may include:

- Loss of a necessary installation permission.
- A material failure of required privacy safeguards.
- Suspected unauthorised access or equipment compromise.
- Significant deviation from the approved field of view or recording configuration.

- Failure of a critical technical security control.
- Withdrawal or expiry of an essential operational authorisation.
- A DPO determination that recording should cease pending further assessment.

Suspension must be documented, including the reason, date and any immediate protective action taken.

6.5 Suspension of host live viewing

Restricted business-host live-viewing access may be suspended or withdrawn independently of the camera's recording operation.

USCN must suspend or revoke such access where its authorisation has expired, the host no longer qualifies, a material security concern arises, or continued access is no longer necessary or proportionate.

Withdrawal of host viewing access does not automatically require the camera itself to be decommissioned, provided its underlying recording operation remains independently lawful and authorised.

6.6 Corrective action and recommissioning

Where recording has been suspended, USCN must identify and address the underlying issue before restoring operation.

Any required technical checks, revised DPIA, privacy assessment or authorisation must be completed before recording resumes.

Where suspension resulted from a material change or compliance failure, renewed written DPO authorisation must be obtained before recommissioning.

A camera must not resume recording solely because a technical fault has been repaired.

6.7 Host-requested removal

A participating host may terminate the hosting arrangement and request removal of USCN equipment without cancellation fees or financial penalties.

USCN will ordinarily arrange removal within 30 calendar days, subject to reasonable access, safety requirements and circumstances outside its control.

Where recording is no longer authorised or justified, USCN must cease recording promptly rather than waiting for physical removal.

6.8 USCN-initiated decommissioning

USCN may decommission a camera where:

- The original public-safety need no longer exists.
- Continued surveillance is no longer necessary or proportionate.
- The host withdraws the required permission.
- Privacy or security risks cannot be adequately mitigated.
- Equipment is no longer suitable or economically reasonable to maintain.
- Legal or regulatory requirements prevent continued operation.
- The DPO determines that the deployment should cease.

The decision and reasons must be documented.

6.9 Secure decommissioning procedure

Decommissioning must include, as applicable:

1. Cessation of operational recording.
2. Revocation of remote and host access permissions.
3. Protection and lawful handling of existing recordings.
4. Secure disconnection of equipment and network access.
5. Removal of cameras and associated equipment.
6. Secure erasure, retention or disposal of storage media as appropriate.
7. Updating the camera register and public camera directory.
8. Recording completion of the decommissioning process.

Any recordings subject to a valid preservation hold must remain protected until their lawful retention requirement ends.

6.10 Equipment and property restoration

USCN must take reasonable care when removing its equipment and should make good installation-related damage where reasonably practicable, subject to the hosting agreement and the condition of the premises.

Removal must be arranged with appropriate regard to electrical safety, physical access and the security of any associated equipment or data.

6.11 Record retention and audit trail

USCN must retain appropriate records of deployment reviews, suspensions, corrective actions, recommissioning decisions, host termination requests and decommissioning activities.

Records containing personal data must be retained only for as long as necessary for their documented purposes and in accordance with applicable retention requirements.

6.12 Public status updates

The public camera directory must be updated within a reasonable period following a material change in operational status.

A camera must not continue to be publicly described as operational once recording has permanently ceased.

Where a camera is temporarily suspended, USCN should reflect that status where appropriate without disclosing information that would create a material security risk.

7. Governance, Responsibilities and Policy Review

7.1 Policy ownership

The Data Protection Officer (DPO) is responsible for overseeing this policy, advising on its data protection implications and ensuring that deployment decisions are subject to appropriate scrutiny.

UK Safety Camera Network Ltd (USCN) remains accountable for its statutory obligations as data controller. DPO approval under this policy does not transfer the organisation's legal responsibilities to the DPO.

7.2 Organisational responsibilities

USCN management is responsible for ensuring that adequate resources, personnel, technical safeguards and operational procedures are available to implement this policy.

Management must ensure that no camera is commissioned without the required assessments, permissions and written authorisation.

Operational personnel must act within their assigned authority and comply with the applicable policies and procedures.

7.3 DPO responsibilities

The DPO must:

- Review camera-specific DPIAs and material privacy risks.
- Assess whether proposed deployments meet the requirements of this policy.
- Provide or withhold written commissioning authorisation under USCN's internal approval arrangements.
- Review material changes requiring renewed authorisation.
- Oversee the handling and escalation of significant data protection concerns.
- Advise on the suspension or cessation of processing where necessary.
- Review this policy and recommend amendments when appropriate.

Where the DPO also holds management or operational responsibilities, USCN must identify and manage any conflict of interest in accordance with applicable data protection law.

7.4 Operational responsibilities

Personnel responsible for installation, maintenance, administration or monitoring must:

- Follow the approved deployment documentation.
- Maintain appropriate confidentiality and information security.
- Avoid unauthorised changes to camera configurations.
- Report faults, security incidents and privacy concerns promptly.
- Maintain accurate operational records.
- Cooperate with reviews, investigations and corrective actions.

Access to camera systems and recordings must be restricted according to authorised responsibilities.

7.5 Hosting agreement oversight

USCN must maintain appropriate records of its hosting arrangements, including host permissions, agreements, material changes, termination requests and equipment removal.

Hosting agreements must remain consistent with this policy and must not grant hosts rights or system access that conflict with USCN's data protection obligations.

7.6 Documented accountability

USCN must maintain a sufficient audit trail to demonstrate that deployment decisions have been assessed and authorised.

Relevant records include:

- Hosting agreements and site assessments.
- Camera-specific DPIAs and legitimate interests assessments where applicable.
- Technical commissioning checks.
- Written commissioning authorisations.
- Privacy and security reviews.

- Maintenance and material change records.
- Complaints, incidents and corrective actions.
- Suspension, recommissioning and decommissioning records.

Records must be protected against unauthorised access, alteration and disclosure.

7.7 Compliance monitoring

USCN must periodically assess compliance with this policy and its associated procedures.

Identified deficiencies must be documented, prioritised according to risk and addressed through proportionate corrective action.

Material or recurring compliance concerns must be escalated to the DPO and appropriate management personnel.

7.8 Policy review

This policy must be reviewed at least annually and sooner where necessary because of:

- Changes in applicable law or regulatory guidance.
- Significant changes to USCN's camera network or operating model.
- Material security incidents or personal data breaches.
- Findings from DPIAs, audits or compliance reviews.
- Significant complaints or identified privacy risks.
- Changes to hosting arrangements or live-viewing arrangements.

The review date, outcome and any resulting amendments must be recorded.

7.9 Amendments and version control

Material amendments to this policy must be documented and submitted through USCN's established approval process.

Each approved version must identify its version number, approval date, approving authority and applicable effective date.

Superseded versions must be retained where necessary for accountability, legal compliance or audit purposes.

Publication of an updated policy must not be represented as evidence that individual camera deployments have been separately authorised.

7.10 Public availability

The current approved public edition of this policy should be made available through USCN's transparency website.

Any public redactions must be limited to information whose disclosure would create a justified security, confidentiality or privacy risk.

The public edition must accurately reflect the approved policy and clearly distinguish policy approval from publication and operational commissioning.

7.11 Relationship with other policies

This policy operates alongside USCN's other applicable governance documents, including:

- USCN-POL-001 — CCTV Operations, Privacy & Data Protection.
- USCN-POL-002 — Footage Access, Disclosure & Retention.
- USCN-POL-003 — Camera Security & Technical Safeguards.

- USCN-POL-004 — Public Transparency & Accountability.
- USCN-POL-005 — Public Live Viewing & Privacy Review.
- USCN-LIA-001 — Legitimate Interests Assessment.

Where requirements overlap, the applicable legal obligations and the more protective relevant safeguards must be considered. Any material inconsistency must be referred for resolution before the affected processing activity proceeds.

7.12 Non-compliance

Failure to comply with this policy may result in suspension of camera operations, withdrawal of system access, corrective action, termination of hosting arrangements or other proportionate measures.

Suspected breaches of data protection law must be assessed under USCN's applicable incident-response and compliance procedures.

7.13 Final approval and commencement

This replacement policy will become an approved controlled document only following explicit final approval by the authorised approving authority.

The approved version must record its approval date and effective date.

Approval of this policy does not itself authorise any individual camera to commence recording or any host to access live CCTV images.
